

INTEGRATED INDUSTRIAL SOLUTIONS

Within this rapidly changing environment, organizations are looking for more than just a supplier. They are looking for partners. Partners who have the skills, resources and expertise to assist them in overcoming the challenges they face. ITmatic, a division in CBI electric which forms part of the Reunert group is a turnkey provider of electrical, power and infrastructure services. ITmatic has fully developed the ability to deliver a partial package or the total integrated combined solution for new or upgraded facilities.

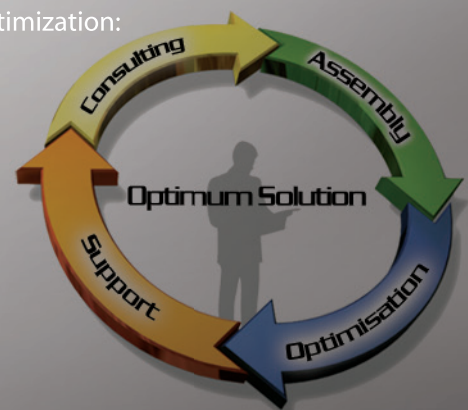

ITmatic's ability to source products from either within the Reunert group of companies or from external "client preferred" vendors enables us to build a best of breed solution to fit each individual client. Our transmission, HV, MV, LV or control solutions can form the basis of your complete solution or individually finalize your precise specifications.

Through our "Plan-Build-Run" business philosophy, we continually interact with our clients through whichever business cycle they might find themselves in. So if planning, building or just maintaining a facility, we will be your unequaled partner.

ITmatic offers the following In-Group technologies leverage from design, build to optimization:

- Load flow and power quality studies
- Network and route planning through surveys
- Fully operational fueled generator power plants
- Substations and switchyard design
- Urban and rural reticulation network design and planning
- Transmission lines
- Project, quality and site management functions
- Full turnkey project design to deliver packages
- Turnkey HV, MV and LV packages
- Transformers and protection
- Fully financed options

ITmatic has the vision and ability to support the client in all these functions in a turnkey format or as a customised approach based on budget or existing supplier relationships. Our commitment is towards the project and the successful delivery of an optimum maintainable solution in the desired budget in the required time.

ITmatic's approach is to view the environment as a seamless system, to apply sound business and engineering principles, to eliminate duplicate activity and to pro-actively seek opportunities for a universal expandable solution in the integration of the total system. We do not "re-invent the wheel". Our integrated approach solves common problems once, thereby maximizing potential for return on investment. We endorse the project, oversee its progress and direct its implementation across the various practices.

ITMATIC COMPREHENSIVE OFFERING

ITmatic has combined a vast number of competencies in the CBI electric group into a combined value proposition for all products and services:

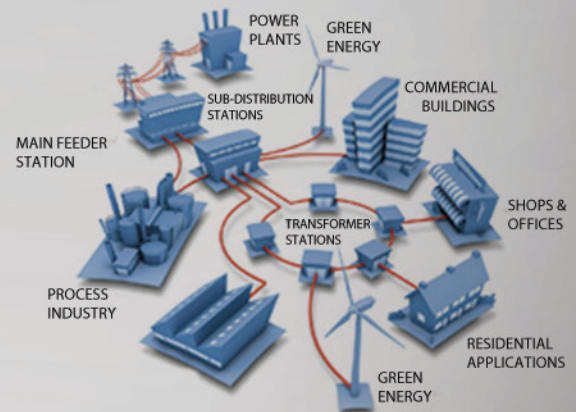

CONSULTING SERVICES:

ITmatic consulting services is an independent structured function, responsible for all design and quality control phases of all electrical projects. Using the available online diagrams and survey collected data, the power system "grid" is modeled accurately by determining future load forecasting and then designing the future potential load characteristics relevant to location, size and timing of future infrastructure expansions.

The vast experience of our engineers allows us the flexibility and thought leadership to ensure the best future fit and budget relevant solution.

Engineering Services Offering:

- Power supply selection. Water, coal, gas etc.
- Area estimation and power-use based simulation techniques
- Substation forecasting and measuring by load flow analysis
- Substation and transformer design packages
- Substation automation and management tools
- Cost break down estimates and tender specifications
- Hazop and quality management process'

LOW, MEDIUM AND HIGH VOLTAGE SOLUTIONS

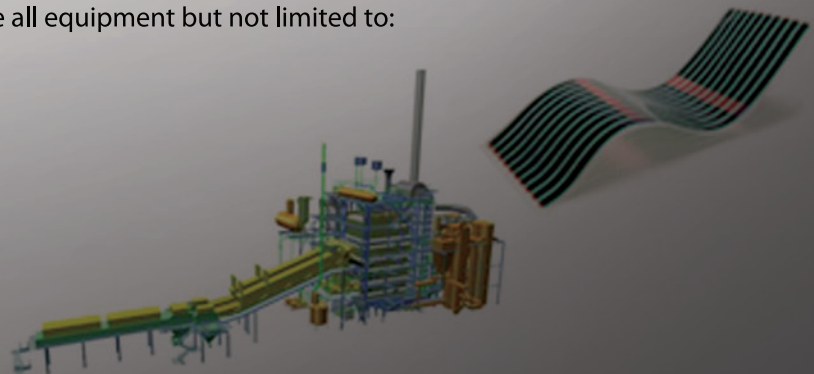

ITmatic's ability to leverage from within the CBI electric group allows us to work with the client to custom engineer the solutions that best match their specific requirements. ITmatic is specialised in the design, engineering, certification, manufacture and installation of Intelligent LV/MV switchgear MCC's, Integrated protection panels and MV/ HV / Transformer packaged substations.

POWER PLANTS SOLUTIONS

As a turnkey energy services company CBI electric presents ITmatic the opportunity to offer their client a full range of turnkey generator power plants. These power plants include all equipment but not limited to:

- Dual-fuel generators, Solar and water
- Integrated fuel plants
- MV containerized switchgear
- HV switching and distribution
- Advance power plant control
- Power control synchronization

TRAINING AND UP SKILLING

As a core value of the group, people development is a primary focus and as such ITmatic extends this service to our valued customers. ITmatic continues this obligation to its clients after project handover by operating a 24hr call centre for dedicated support. Our service and support team trains and supports client personnel during the project implementation to ensure the optimum skills transfer throughout the project lifecycle.
